## WORK EXPERIENCE

### FULL STACK STUDENT

Full Stack Student | Feb 2021 - April 2021

- Constructed Applications daily ranging from Vanilla JavaScript to Full Stack Web Apps using various frameworks and libraries.
- Functioned as a key Full Stack Programmer in a large two-week team build.
- Performed more than 500+ hours between on campus and off-campus learning.
- Achieved countless amounts of self-goals and ultimately changed career paths.

## APPLICATION BUILDS

### PROPER

- Lightweight and easily scalable mobile ready Project Management Application. Built to make the Management teams life easy by easily being able to upload data about Rentals, Tenants, Maintenance Tasks, Messaging and much more.
- Built with JavaScript, Vue 3 Front-End, Vue 3 Datepicker Front-End, Firebase Front-End, NodeJS and MongoDB Back-End, Auth0 Authentication and Nodemailer Back-End.
- Acted as a Full-Stack Developer initially helping with planning and execution of Back-End construction. After getting the Back-End fired up the role shifted to helping mold the Front-End.

### KanBan Replica

- Responsive Team-Management board that easily allows you to pick up right where you left off with your team. Post boards in which you will be able to post List Columns that make a great structure to input Tasks where your team can then write notes.
- Built with JavaScript, Vue 3 Front-End, NodeJS and MongoDB Back-End, Auth0 Authentication.
- Planned and executed the first team-built Application. Acted as a Full-Stack Developer while Partner-Programming for four days. Excellent opportunity to learn teamwork and patience.
